## Security

### Device Login Notifications Added to Campus (SIS-98816) [Enhancement]

In an effort to increase security and Campus account awareness, users will receive an email when someone logs into Campus using their account from an unknown device. Now, when logging into Campus for the first time from a device (after taking Release Pack .1649), Campus will require you to enter an Account Security Email address if one does not already exist and ask if you would like to remember the device for future logins. Once an email address is established, any time you log into Campus using a device that has not been used to login into Campus before or has not been designated as a device for Campus to remember will result in an email being sent to your Account Security Email address, alerting you that you (or someone) logged into Campus.

These notifications were implemented to keep you aware of any account logins, especially those that might have come from compromised account login information.

NOTE: This enhancement will create additional email traffic.

For more information about how Campus remembers a device, how to turn off this functionality, or how to minimize the amount of email notifications, see the Device Login Notifications Added to Campus article.

For more information about enabling or disabling login notifications, see the Login Security Settings and Establishing Trusted Devices for Campus Login articles.
